

Clover Info

Using Clover

CLOVER - Code Coverage Analysis

Clover is generally used with bamboo, although it can also be intergrated with several IDEs or other development environments.

- Clover with Ant = <http://confluence.atlassian.com/display/CLOVER/Clover-for-Ant>

 This page is a work in progress

Installing Clover

The installation instructions differ depending on what build environment or IDE you are using. It is available for ant, eclipse, idea, and maven.

Installing Clover for Ant

Complete instructions can be found [here](#)

Download clover from <http://www.atlassian.com/software/clover/CloverDownloadCenter.jspa> and then unzip to a directory you wish to be the clover home. After this install the CRBS license key as is described below.

To use clover for a build, add the following line to your build file (ie: build.xml)

 `<taskdef resource="cloverlib.xml" classpath="/path/to/clover.jar"/>`

Other clients

Installation of clover for other clients can be found [here](#)

Installing License

CRBS Clover License

Eclipse users: Within Eclipse, select from the menu "Window > Preferences" and click on "Clover > License" and paste the above license string into the license text area.

IDEA users: Within IDEA, select from the menu "File > Settings > IDE Settings > Clover License" and paste the above license string into the license text area.

Ant & Maven Users: Copy the above license code into a blank file entitled cloer.license and location as outlined in the Clover documentation (<http://www.atlassian.com/software/clover/docs/>)
